

Erdős Problem #470

EP-470	L1 - Tractable	Ouvert	Number Theory
--------	----------------	--------	---------------

Énoncé original (anglais, reproduction mot pour mot)

Call n weird if $\sigma(n) \geq 2n$ and n is not pseudoperfect, that is, it is not the sum of any set of its divisors.

Are there any odd weird numbers? Are there infinitely many primitive weird numbers, i.e. those such that no proper divisor of n is weird?
