

Erdős Problem #501

EP-501	L1 - Tractable	Partiellement résolu	Combinatorics
--------	----------------	----------------------	---------------

Énoncé original (anglais, reproduction mot pour mot)

For every $x \in \mathbb{R}$ let $A_x \subset \mathbb{R}$ be a bounded set with outer measure < 1 . Must there exist an infinite independent set, that is, some infinite $X \subseteq \mathbb{R}$ such that $x \notin A_y$ for all $x \in X$?

If the sets A_x are closed and have measure < 1 , then must there exist an independent set of size $\aleph_1$?
