

Erdős Problem #514

EP-514	L1 - Tractable	Partiellement résolu	Graph Theory
--------	----------------	----------------------	--------------

Énoncé original (anglais, reproduction mot pour mot)

Let $f(z)$ be an entire transcendental function. Does there exist a path L so that, for every n , $\left| \frac{f(z)}{z^n} \right| \rightarrow 0$ as $|z| \rightarrow \infty$ along L ?

Can the length of this path be estimated in terms of $M(r) = \max_{|z|=r} |f(z)|$?

Does there exist a path along which $|f(z)|$ tends to ∞ faster than a fixed function of $M(r)$ (such that $M(r)^\epsilon$)?
