

Erdős Problem #560

EP-560	L1 - Tractable	Partiellement résolu	Graph Theory
--------	----------------	----------------------	--------------

Énoncé original (anglais, reproduction mot pour mot)

Let $\hat{R}(G)$ denote the size Ramsey number, the minimal number of edges m such that there is a graph H with m edges such that in any 2-colouring of the edges of H there is a monochromatic copy of G .

Determine $\hat{R}(K_{n,n})$, where $K_{n,n}$ is the complete bipartite graph with n vertices in each component.
