

Erdős Problem #561

EP-561	L1 - Tractable	Partiellement résolu	Graph Theory
--------	----------------	----------------------	--------------

Énoncé original (anglais, reproduction mot pour mot)

Let $\hat{R}(G)$ denote the size Ramsey number, the minimal number of edges m such that there is a graph H with m edges such that in any 2-colouring of the edges of H there is a monochromatic copy of G .

Let F_1 and F_2 be the union of stars. More precisely, let $F_1 = \cup_{i \leq s} K_{1, n_i}$ and $F_2 = \cup_{j \leq t} K_{1, m_j}$. Prove that $\hat{R}(F_1, F_2) = \sum_{2 \leq k \leq s+2} \max\{n_i + m_j - 1 : i+j=k\}$.
