

Erdős Problem #563

EP-563	L1 - Tractable	Partiellement résolu	Graph Theory
--------	----------------	----------------------	--------------

Énoncé original (anglais, reproduction mot pour mot)

Let $F(n, \alpha)$ denote the smallest m such that there exists a 2 -colouring of the edges of K_n so that every $X \subseteq [n]$ with $|X| \geq m$ contains more than $\alpha \binom{|X|}{2}$ many edges of each colour.

Prove that, for every $0 \leq \alpha < 1/2$, $F(n, \alpha) \sim c_\alpha \log n$ for some constant c_α depending only on α .
