

Erdős Problem #596

EP-596	L1 - Tractable	Partiellement résolu	Graph Theory
--------	----------------	----------------------	--------------

Énoncé original (anglais, reproduction mot pour mot)

For which graphs G_1, G_2 is it true that

{UL}

{LI} for every $n \geq 1$ there is a graph H without a G_1 but if the edges of H are n -coloured then there is a monochromatic copy of G_2 , and yet

{LI} for every graph H without a G_1 there is an $\aleph_0$ -colouring of the edges of H without a monochromatic G_2 .

{/UL}
