

Erdős Problem #629

EP-629	L1 - Tractable	Ouvert	Graph Theory
--------	----------------	--------	--------------

Énoncé original (anglais, reproduction mot pour mot)

The list chromatic number $\chi_L(G)$ is defined to be the minimal k such that for any assignment of a list of k colours to each vertex of G (perhaps different lists for different vertices) a colouring of each vertex by a colour on its list can be chosen such that adjacent vertices receive distinct colours.

Determine the minimal number of vertices $n(k)$ of a bipartite graph G such that $\chi_L(G) > k$.
