Énoncé original (anglais, reproduction mot pour mot)

A pairwise balanced design for $\{1, \dots, n\}$ is a collection of sets $A_1, \dots, A_m \subseteq \{1, \dots, n\}$ such that $2 \leq |A_i| \leq n$ and every pair of distinct elements $x, y \in \{1, \dots, n\}$ is contained in exactly one A_i .

Is there a constant $C > 0$ and, for all large n , a pairwise balanced design such that $|A_i| > n^{1/2} - C$ for all $1 \leq i \leq m$?
