

Erdős Problem #719

EP-719	L1 - Tractable	Ouvert	Graph Theory
--------	----------------	--------	--------------

Énoncé original (anglais, reproduction mot pour mot)

Let $\mathrm{ex}_r(n;K_{r+1}^r)$ be the maximum number of r -edges that can be placed on n vertices without forming a K_{r+1}^r (the r -uniform complete graph on $r+1$ vertices).
Is every r -hypergraph G on n vertices the union of at most $\mathrm{ex}_r(n;K_{r+1}^r)$ many copies of K_r^r and K_{r+1}^r , no two of which share a K_r^r ?
