

Erdős Problem #770

EP-770	L1 - Tractable	Ouvert	Number Theory
--------	----------------	--------	---------------

Énoncé original (anglais, reproduction mot pour mot)

Let $h(n)$ be minimal such that $2^{n-1}, 3^{n-1}, \dots, h(n)^{n-1}$ are mutually coprime.

Does, for every prime p , the density δ_p of integers with $h(n)=p$ exist? Does $\liminf_{h(n)=\infty}$? Is it true that if p is the greatest prime such that $p-1 \mid n$ and $p > n^\epsilon$ then $h(n)=p$?
