Énoncé original (anglais, reproduction mot pour mot)

We call $A \subset \mathbb{N}$ dissociated if $\sum_{n \in X} n \neq \sum_{m \in Y} m$ for all finite $X, Y \subset A$ with $X \neq Y$.

Let $A \subset \mathbb{N}$ be an infinite set. We call A proportionately dissociated if every finite $B \subset A$ contains a dissociated set of size $\gg |B|$.

Is every proportionately dissociated set the union of a finite number of dissociated sets?
