Énoncé original (anglais, reproduction mot pour mot)

Call a set $S \subseteqq \{1, \dots, n\}$ admissible if $(a, b) = 1$ for all $a \in S, b \in S$. Let $G(n) = \max_{S \subseteqq \{1, \dots, n\}} \sum_{a \in S} a$ and $H(n) = \sum_{p < n} p + n \pi(n^{1/2})$. Is it true that $G(n) > H(n) - n^{1+o(1)}$? Is it true that, for every $k \geq 2$, if n is sufficiently large then the admissible set which maximises $G(n)$ contains at least one integer with at least k prime factors?
