## Énoncé original (anglais, reproduction mot pour mot)

For  $k \geq 0$  and  $n \geq 1$  let  $v(n, k)$  count the prime factors of  $n+k$  which do not divide  $n+i$  for  $0 \leq i < k$ . Equivalently,  $v(n, k)$  counts the number of prime factors of  $n+k$  which are  $> k$ .

Is it true that  $v_0(n) = \max_{k \geq 0} v(n, k) \rightarrow \infty$  as  $n \rightarrow \infty$ ?
