

Erdős Problem #939

EP-939	L1 - Tractable	Partiellement résolu	Number Theory
--------	----------------	----------------------	---------------

Énoncé original (anglais, reproduction mot pour mot)

Let $r \geq 2$. An r -powerful number n is one such that if $p \mid n$ then $p^r \mid n$.

If $r \geq 4$ then can the sum of $r-2$ coprime r -powerful numbers ever be itself r -powerful?

Are there at most finitely many such solutions?

Are there infinitely many triples of coprime r -powerful numbers a, b, c such that $a+b=c$?
