

Erdős Problem #944

EP-944	L1 - Tractable	Partiellement résolu	Number Theory
--------	----------------	----------------------	---------------

Énoncé original (anglais, reproduction mot pour mot)

A critical vertex, edge, or set of edges, is one whose deletion lowers the chromatic number.

Let $k \geq 4$ and $r \geq 1$. Must there exist a graph G with chromatic number k such that every vertex is critical, yet every critical set of edges has size $> r$?
