

Gao's theorem for nonabelian groups

OPG-337	L1 - Tractable	Ouvert	Number Theory
---------	----------------	--------	---------------

Énoncé original (anglais, reproduction mot pour mot)

For every finite multiplicative group G , let $s(G)$ ($s'(G)$) denote the smallest integer m so that every sequence of m elements of G has a subsequence of length >0 (length $|G|$) which has product equal to 1 in some order.

Conjecture $s'(G) = s(G) + |G| - 1$ for every finite group G .
