

Melnikov's valency-variety problem

OPG-46575	L1 - Tractable	Ouvert	Graph Theory
-----------	----------------	--------	--------------

Énoncé original (anglais, reproduction mot pour mot)

Problem The valency-variety $w(G)$ of a graph G is the number of different degrees in G . Is the chromatic number of any graph G with at least two vertices greater than $\lceil \frac{\lfloor w(G)/2 \rfloor}{|V(G)| - w(G)} \rceil$?
