Question

- Does $\{\prec\}\text{-invariant}\backslash\text{:FO} = \text{FO}$ hold over graphs of bounded tree-width?
- Is $\{\prec\}\text{-invariant}\backslash\text{:FO}$ included in MSO over graphs?
- Does $\{\prec\}\text{-invariant}\backslash\text{:FO}$ have a 0-1 law?
- Are properties of $\{\prec\}\text{-invariant}\backslash\text{:FO}$ Hanf-local?
- Is there a logic (with an effective syntax) that captures $\{\prec\}\text{-invariant}\backslash\text{:FO}$?
