

Oriented chromatic number of planar graphs

OPG-494	L1 - Tractable	Partiellement résolu	Graph Theory
---------	----------------	----------------------	--------------

Énoncé original (anglais, reproduction mot pour mot)

An oriented colouring of an oriented graph is assignment c of colours to the vertices such that no two arcs receive ordered pairs of colours (c_1, c_2) and (c_2, c_1) . It is equivalent to a homomorphism of the digraph onto some tournament of order k .

Problem What is the maximal possible oriented chromatic number of an oriented planar graph?
