Énoncé original (anglais, reproduction mot pour mot)

Problem Let H_1 and H_2 be two r -uniform hypergraph on the same vertex set V . Does there always exist a partition of V into r classes $V_1, \dots, V_r$ such that for both $i=1,2$, at least $\lfloor m_i/r \rfloor$ hyperedges of H_i meet each of the classes $V_1, \dots, V_r$?
