

Antidirected trees in digraphs

OPG-46279

L1 - TRACTABLE

PARTIALLY SOLVED

Graph Theory

ORIGINAL PROBLEM STATEMENT

An antidirected tree is an orientation of a tree in which every vertex has either indegree 0 or outdegree 0.

Conjecture Let D be a digraph. If $|A(D)| > (k - 2)|V(D)|$, then D contains every antidirected tree of order k .
