

Half-integral flow polynomial values

OPG-348

L1 - TRACTABLE

OPEN

Graph Theory

ORIGINAL PROBLEM STATEMENT

Let $\Phi(G, x)$ be the flow polynomial of a graph G . So for every positive integer k , the value $\Phi(G, k)$ equals the number of nowhere-zero k -flows in G .

Conjecture $\Phi(G, 5.5) > 0$ for every 2-edge-connected graph G .
